Qualiprotec Practical Test Würenlos Motorway Bridge and Shopping/Service Area

- 2 sq m test area
- Pre-treatment
- Application of clear fluoropolymer paint
- 1st inspection after 3 years

No loss
of shine,
no change
in color

Proven
under the
most extreme
conditions

September 2010
Test area on the chalked façade

September 2010
Definite difference before and after

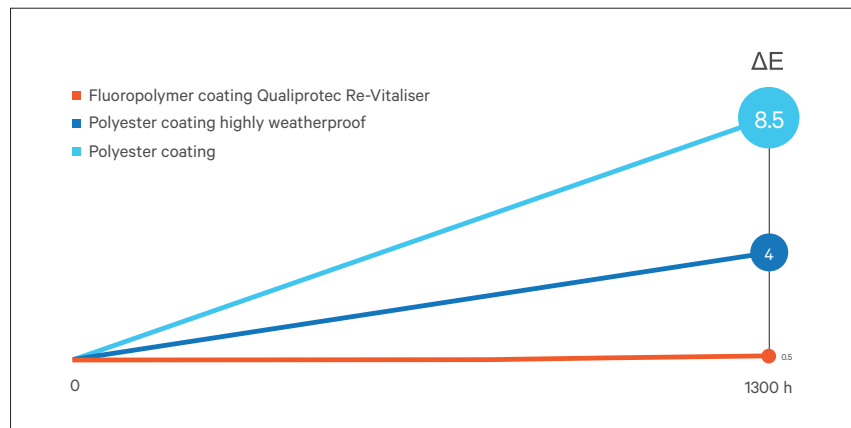

September 2013
After three years no change in color and no loss of shine

Motorway Practical Test Würenlos Motorway Shopping/Service Area

The Würenlos Motorway Bridge between Zurich and Baden is the largest in Europe, popularly known as the «feeding trough». More than 120 000 vehicles whoosh underneath it, day in and day out. Soot and dirt particles, light and UV rays, wind and weather: because the façade is exposed to the most extreme conditions, it is ideal for «road testing» Qualiprotec.

In summer 2010 two square metres of the aluminium façade were cleaned (dirt and chalking removed) with Qualiprotec Cleaner N, then thoroughly cleaned with Qualiprotec Abrasive B and white pad to achieve a clean, slightly roughened surface. Finally Qualiprotec Re-Vitaliser Q35, a satin-gloss clear coating, was applied. Result: **the original color looks just like new.** Inspection after three years proves: **there is zero change in color.** The motorway «road test» underlines the excellent results of the Florida test, the toughest color test in the world (see diagram).

Florida test: minimal change in color ΔE
Qualiprotec Re-Vitaliser (fluoropolymer technology) with best performance in direct comparison with other coatings
